Edgar R. Weippl - www.e-learning-security.org

Motivation

- n Situation - Reliability
 - Increased dependence on systems reduces fault tolerance
 - Just in time delivery systems
- n Machines were built for maximum extensibility
- n Technology built by geeks for geeks
- n Computers can, by design, run any code

Edgar R. Weippl - www.e-learning-security.org

Target Audience

- n **Authors** creating e-learning content
- n **Teachers** using e-learning systems.
- n **Managers** responsible for the selection and maintenance of e-learning programs
- n Security Checklist

Edgar R. Weippl - www.e-learning-security.org

Authors

- n Why is security relevant when creating content?
- n Which kind of threats are there?
- n Which assets should I protect?
- n How can I protect the aforementioned assets?
- n Are there ways to impede illegal use through smart design?
- n How much additional effort will be required?

Edgar R. Weippl - www.e-learning-security.org

Teachers

- n Why is security relevant when using e-learning?
- n Which kind of threats are there?
- n Which assets should I protect?
- n Does standardization (of e.g. exams) undermine the freedom of academia?

Edgar R. Weippl - www.e-learning-security.org

Teachers

- n How can I determine the level of risk exposure of my exam questions?
- n How can I make my lecture „secure“? Will it have a negative impact on my “honest” students?
- n How much additional effort will be required?

Edgar R. Weippl - www.e-learning-security.org

Managers

- n Which organizational issues are relevant to security?
- n How is security influenced by
 - infrastructure
 - buildings and floor layouts,
 - organizational workflows
e.g. how are exam results handled to eventually affect grades?

Edgar R. Weippl - www.e-learning-security.org

Managers

- n How can a manager make a good case for security so that teachers, authors and students will support him?
- n How much additional effort will be required?

Edgar R. Weippl - www.e-learning-security.org

Contents

- n Introduction to Security and Dependability
- n Content Authors
- n Teachers
- n Managers
- n Security Risk Analysis

Edgar R. Weippl - www.e-learning-security.org

Contents

- n Techniques to protect digital content
- n Privacy
- n Feedback and Assessment of Students, Authors and Teachers
- n Security Checklist

Edgar R. Weippl - www.e-learning-security.org

The Basics

Edgar R. Weippl - www.e-learning-security.org

The Basics - Security

n Secrecy

n Integrity

n Availability

Edgar R. Weippl - www.e-learning-security.org

Basic Terms

- n **Secrecy** Users may obtain access only to those objects, for which they have received authorization
- n **Integrity** means that only authorized people are permitted to modify data (or programs). Secrecy of data is closely connected to the integrity of programs of operating systems.

Edgar R. Weippl - www.e-learning-security.org

Basic Terms

- n **Availability**
A system is operational and functional;
loss of availability is a.k.a denial-of-service

Edgar R. Weippl - www.e-learning-security.org

The Basics - Dependability

- n Availability
- n Reliability
- n Safety
- n Integrity
- n Maintainability

Edgar R. Weippl - www.e-learning-security.org

The Basics - Dependability

- n **Reliability**
refers to the continuity of correct service.
- n **Safety**
the absence of catastrophic consequences on the user(s) and the environment
- n **Maintainability**
the ability to undergo modifications and repairs

Edgar R. Weippl - www.e-learning-security.org

Secondary Attributes

- n **Non-repudiation**
Users are not able to deny (plausibly) to have carried out operations

Edgar R. Weippl - www.e-learning-security.org

Identification & Authentication

- n Without reliable authentication systems security cannot be achieved.
- n What You Know - Passwords
- n What You Have - Keys, Cards
- n What You Are - Biometrics
- n What You Do - Signature

Edgar R. Weippl - www.e-learning-security.org

Passwords

- Use this sentence to get a great password!

Uts,tgagp!

Learn how to type

Uts,tg**ap** ← ← ← ag**lqfta** ← ← ← ← ←

Edgar R. Weippl - www.e-learning-security.org

What you have

- RFID cards - keys for rooms
- Smart cards
 - Excellent security when correctly used
 - Best combined with public key cryptography
 - In Austria used for e-government (currently first field users)

Edgar R. Weippl - www.e-learning-security.org

Biometrics

- User acceptance problems
- Not very reliable
- Useful for in combination with e.g. cards, to check that they are not passed on.

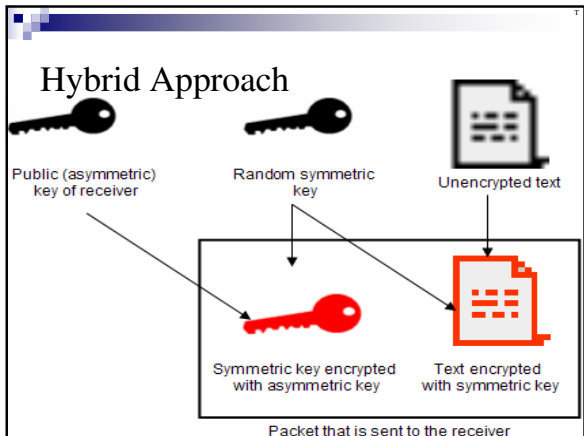

Edgar R. Weippl - www.e-learning-security.org

PKI – Key Management

- How are keys produced? (Trojans)
- Who generates keys and where? (Trojans)
- Where are keys stored? (public computers)
- When and how do keys become invalid?

Edgar R. Weippl - www.e-learning-security.org

Authors

Edgar R. Weippl - www.e-learning-security.org

Authors

- n Why is security relevant when creating content?
- n Which assets should I protect?
- n How can I protect the aforementioned assets?
- n Are there ways to impede illegal use through smart design?
- n How much additional effort will be required?

Edgar R. Weippl - www.e-learning-security.org

Why is security relevant when creating content?

- n Readers expect integrity of the content.
- n Readers want to read without being watched.
- n Protection against unauthorized use.
- n Protection against unauthorized modification.
- n Protection against loss / DoS.

Edgar R. Weippl - www.e-learning-security.org

Which assets should I protect?

- n Texts
- n Images
- n Audio / Video
- n Interactive Examples / Applications
- n Interaction between real people

Edgar R. Weippl - www.e-learning-security.org

How Can I Protect Texts?

- n Cryptolope™ (IBM) or similar concepts
- n Non-standard browsers

- n Do not design so that the real value is the text

Edgar R. Weippl - www.e-learning-security.org

How Can I Protect Images?

- n Watermarking offers mostly protection of the copyright but not copy protection.
- n Make „batch copying“ more difficult
- n Use visible watermarks

Edgar R. Weippl - www.e-learning-security.org

How Can I Protect Audio/Video?

How Can I Protect Applications?

- n Offline Registration Numbers
- n Online Authorization
- n Dongles
 - n images from www.keylok.com
 - n www.microcosm.biz

Edgar R. Weippl - www.e-learning-security.org

Are there ways to impede illegal use through smart design?

- n Focus on the real value, which will most probably be interaction.
- n Interaction is easier to protect.
- n Protection of executable programs.
- n **Interaction between people cannot be copied.**

Edgar R. Weippl - www.e-learning-security.org

How much additional effort will be required?

- n Risk Analysis will require days, not weeks.
- n Implementation will not be more work once users are trained and the workflow has been established.

Edgar R. Weippl - www.e-learning-security.org

Teachers

Edgar R. Weippl - www.e-learning-security.org

Teachers

- n Why is security relevant when using e-learning?
- n Which kind of threats are there?
- n Which assets should I protect?
- n Does standardization (of e.g. exams) undermine the freedom of academia?

Edgar R. Weippl - www.e-learning-security.org

Teachers

- n How can I determine the level of risk exposure of my exam questions?
- n How can I make my lecture „secure“? Will it have a negative impact on my “honest” students?
- n How much additional effort will be required?

Edgar R. Weippl - www.e-learning-security.org

Why is security relevant when using e-learning?

- n Lecture notes
- n Exams
- n Grades and other confidential information
- n Electronic communication with students

Edgar R. Weippl - www.e-learning-security.org

Which kind of threats are there?

- n Secrecy
 - e.g. grades & information about students
- n Integrity
 - e.g. students' answers on exams
- n Availability
 - e.g. examination systems
- n Non-repudiation
 - e.g. handing in of exams

Edgar R. Weippl - www.e-learning-security.org

Which kind of threats are there?

- n Reliability
 - Automatic grading
- n Maintainability
 - Who can modify the platform – access to source code?
- n Do not underestimate the additional effort required to maintain large installations
 - Personal use
 - Department wide
 - University wide

Edgar R. Weippl - www.e-learning-security.org

Which assets should I protect?

- n Bulletin Boards
- n Teaching Material
- n Email
- n ...any form of interaction and communication

Edgar R. Weippl - www.e-learning-security.org

Freedom of Academia

- n Does standardization (of e.g. exams) undermine the freedom of academia?
- n Industrialization of educational process
- n Faculty in the mass production of content?
- n Focus on interaction – the real value

Edgar R. Weippl - www.e-learning-security.org

Exams

- n How can I determine the level of risk exposure of my exam questions?
- n Constantly monitor for suspicious results
- n Create dynamic questions whenever possible
- n Use at least some free text answers

Edgar R. Weippl - www.e-learning-security.org

“Securing” Lectures

- n How can I make my lecture „secure“?
- n Will it have a negative impact on my “honest” students?
- n Think about these issues when setting up e-learning classes

Edgar R. Weippl - www.e-learning-security.org

“Securing” Lectures

- n Specify how Bulletin Boards are backed up (or not) and when and how the content is deleted.
- n Encourage the use of pseudonyms.
- n For confidential/important information use encrypted/signed email or confirm personally

Edgar R. Weippl - www.e-learning-security.org

“Securing” Lectures

- n Delete Emails after a specified period
- n Denial-of-Service is frustrating for students. Provide
 - instant help for real-time activities such as chats (phone number)
 - and help within a day for all other issues
- n Run checksums on the content to ensure integrity.

Edgar R. Weippl - www.e-learning-security.org

Managers

Edgar R. Weippl - www.e-learning-security.org

Managers

- n Which organization issues are relevant to security?
- n How is security influenced by
 - infrastructure
 - buildings and floor layouts,
 - organizational workflows (e.g. how are exam results handled to eventually affect grades?)

Edgar R. Weippl - www.e-learning-security.org

Managers

- n How can a manager make a good case for security so that teachers, authors and students will support him?
- n How much additional effort will be required?

Edgar R. Weippl - www.e-learning-security.org

Which organization issues are relevant to security?

- n Communication processes (e.g. exam results)
- n Physical access (e.g. hardware, printed information, backups)
- n Processes in cases of emergency (fire alarms, ...)

Edgar R. Weippl - www.e-learning-security.org

How is security influenced

- n by infrastructure
- n buildings and floor layouts,
- n organizational workflows

Edgar R. Weippl - www.e-learning-security.org

Motivation

- n How can a manager make a good case for security so that teachers, authors and students will support him?
- n Inform about risks and what each individual person might lose.
- n Organize a fast, efficient and effective security risk analysis.

Edgar R. Weippl - www.e-learning-security.org

How much additional effort will be required?

- n None that does not pay off
- n Risk Analysis takes several days for a typical (small) research project.

Edgar R. Weippl - www.e-learning-security.org

E-Learning a New Critical System?

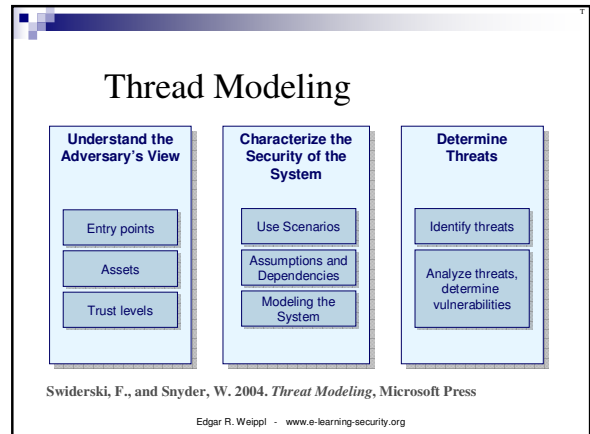

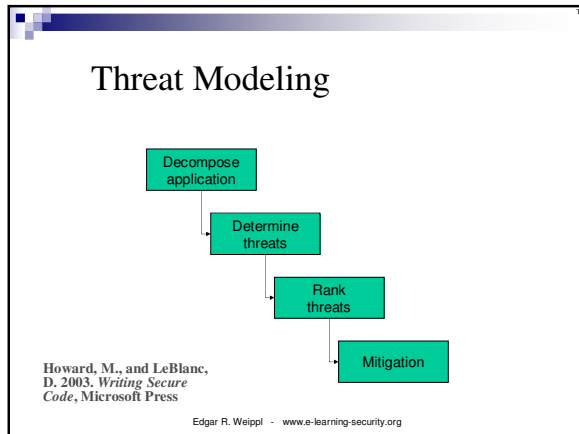

- n How much downtime are you / students willing to accept?
- n Continuity in support
 - Student admins not well suited
 - Simple systems! (Moodle?)
- n Vendor lock in
 - Do not use elaborate content unless you know what you are doing

Edgar R. Weippl - www.e-learning-security.org

Which kind of threats are there?

- n Do not underestimate the additional effort required to maintain large installations
 - Personal use
 - Department wide
 - University wide

Edgar R. Weippl - www.e-learning-security.org

- ## Security Checklist
- n Learn – take training, read guidance, help educate users
 - n Connect – participate in the community, subscribe security newsletters
 - n Manage risk – implement security and risk management process
- Edgar R. Weippl - www.e-learning-security.org

- ## Security Checklist
- n Integrate – adapt defense-in-depth security approach
 - n Implement – operating system, learning platform
 - n Standardization – maintenance, patches, ...
- Edgar R. Weippl - www.e-learning-security.org

- ## Resources
- n Guidance and training
 - Security Guidance Center
 - n <http://www.microsoft.com/security/guidance/default.aspx>
 - E-Learning Clinics
 - n <https://www.microsoftlearning.com/security/>
 - Moodle
 - n <http://security.moodle.org> (Developers)
 - n <http://www.moodle.org>
 - NIST
 - n <http://www.nist.org>
- Edgar R. Weippl - www.e-learning-security.org

- ## Resources
- n Community engagement
 - Newsletters
 - n <http://www.microsoft.com/technet/security/secnews/newsletter.htm>
 - Webcasts and chats
 - n <http://www.microsoft.com/seminar/events/security.mspx>
- Edgar R. Weippl - www.e-learning-security.org

Resources

- n Newsletter Bruce Schneier
 - To subscribe, visit <http://www.schneier.com/crypto-gram.html>
- n Risks Newsletter
 - Issues is archived at <http://www.risks.org>
 - The current issue can be found at <http://www.csl.sri.com/users/risko/risks.txt>

Edgar R. Weippl - www.e-learning-security.org

The 7 most important facts

- n Perform a security risk analysis for each and every project
- n Use simple tools and procedures – non-compliance is the greatest risk
- n Test your tools and procedures
- n Evaluate additional risks introduced by risk control measures (e.g. backups – secrecy, cryptography – availability)

Edgar R. Weippl - www.e-learning-security.org

The 7 most important facts

- n Use the security checklist (and update it)
- n Educate your colleagues and students about security basics
- n Think about the impact that any action has on security issues!

Edgar R. Weippl - www.e-learning-security.org

Security in E-Learning

Upcoming book published by Springer, NY addressing

- n Teachers
- n Authors
- n Managers
- n Students

that use e-learning systems

Edgar R. Weippl - www.e-learning-security.org

It's not over yet!

www.e-learning-security.org

- Slides
- In-depth Content
- n Case Study of the current situation concerning security in e-learning

Edgar R. Weippl - www.e-learning-security.org

Thanks for Attending the
Tutorial

Edgar R. Weippl - www.e-learning-security.org
